

## SafKvas C-73

Dry yeasts for kvass production

<b>Ingredients:</b>	Yeast ( <i>Saccharomyces cerevisiae</i> ), emulsifier (E491)										
<b>Description:</b>	The dried yeasts have good performances on fermentation activity, sedimentation, filterability /clarification, viability of cell population and producing of total acidity. SafKvas C-73 on grain or fruits substrate produces a balanced organoleptic profile with typical aroma compounds that gives nice character to the beverage.										
<b>Dosage:</b>	10 - 60 g/hl of wort according the specific process										
<b>Pitching instructions:</b>	<p>The dried yeast can be pitched directly into the fermentation vessel Progressively sprinkle the dried yeast into the wort at 25°C +/- 5°C and make sure the yeast covers all the surface of wort available in order to avoid clumps. Let it rest for 15-30 minutes and then mix the wort.</p> <p>Yeast can alternatively be rehydrated in separated tank: Sprinkle the dry yeast into 10 times its own weight of water or wort. When the yeast is reconstituted into a cream (15 to 30 min), continue to stir for another 30 minutes. The yeast cream is then ready to pitch into the fermentation vessel.</p>										
<b>Fermentation temperature:</b>	25°C +/- 5°C										
<b>Packaging:</b>	1x10 Kg vacuum packed bag in a cardboard box										
<b>Storage:</b>	<p>During transport : The product can be transported and stored at room temperature for periods of time not exceeding 3 months without affecting its performance.</p> <p>At final destination: Store in cool, dry conditions. Opened sachets must be sealed and stored at 4C and used within 7 days of opening. Do not use soft or damaged sachets.</p>										
<b>Shelf life:</b>	Refer to best before end date on sachets. 48 months from production date under recommended storage conditions.
